You search for the development of new products and systems, with preference based upon patents, Innovation Support with new ideas and concepts! **IS** (Innovation Support) is an independent innovation consultancy with activities focusing on the development of ideas and concepts during the initial phase of the innovation process for companies and organisations who want to grow by means of an innovation strategy.

The objective is to give the customer the opportunity to make decisions about detailed follow-up developments, based on business goals and financial possibilities, whilst keeping the further risks to a minimum. **IS** consultants have many years of international experience in developing ideas and concepts and as a result of this a variety of potential new products and systems can be considered for all kind of applications.

IS consultants have been named as inventor or co-inventor in more than 140 patents, examples of being the mechanical Drive by Wire functions for the "FILO" concept car developed by SKF and Bertone, transmissions such as CVT and differentials, wheel suspension hybrid systems, bearing hybrid systems for vehicles, production and assembly processes, etc.

Our Concept

Many production, assembly and supplier companies have limited and/or insufficient manpower for the development of ideas and concepts for new products or systems. **IS** offers knowledge, expertise and creativity during the initial phase of the innovation process in order to aid the development of new ideas and concepts for mechanically based products and systems, in particular for automotive and industrial applications.

The products and systems can have static and dynamic functions with rotating or linear movements for example. In combination with connected or integrated power source(s), one of the most important aspects is the improvement of the efficiency of energy consumption. This can be achieved by the reduction of friction and weight for example. Downsizing and cost aspects play an important role in this respect.

In many cases the applied technologies can also be used for agricultural machines for example, and different kinds of materials, production and assembly processes can be applied if necessary. Whenever possible **IS** strives to obtain property rights for the customer and can offer support with the patent application filing process, if required.

A design problem? A new design idea needed? What to do!

Do you have a mechanical design, assembly or manufacturing problem with your product or (sub)system, or do you want a new mechanical product or (sub)system design idea from an Automotive-, Industrial-, Agriculture system up to an Household Appliance, you can contact Innovatie Support for an optional orientating discussion.

You can also e-mail your questions and information to **IS** for advise without cost. Your information will be treated as confidential information and you always get response. Include in your information a Performance-Application specification for the product or (sub)system. Indication maximum design dimensions approximately 500x500x500mm.

If you wish on the basis of your information direct support from **IS** at your company, e.g. with active participation in a brainstorm session or project discussion, then this is possible with an order of minimal 3-working hours which can be extended per working hour followed. All **IS** proposals and ideas are then also the property of the sponsor.
